

#### THE AD HOC GROUP FOR MEDICAL RESEARCH

December 4, 2020

The Honorable Joseph R. Biden, Jr. President-elect 1401 Constitution Ave. NW Washington, DC 20230

#### Dear President-elect Biden:

The Ad Hoc Group for Medical Research, and the 349 undersigned member organizations representing patients, clinicians, scientists, educators, academic institutions, research organizations, and industry, thank you for your steadfast support for science. As the oldest coalition advocating for the federal investment in the National Institutes of Health (NIH) and biomedical, bioengineering, behavioral, and social science research, we are grateful that you support increased and sustainable funding growth for the NIH as part of \$300 billion in new research and development investments in your Build Back Better plan.

We applaud the steps you and your team have already taken to seek and then follow recommendations from the scientific community during the deadly COVID-19 pandemic, and we appreciate your recognition that investments in scientific discovery are crucial to improving the nation's health and economy in both the near- and long-term. In the months and years ahead, we urge attention to:

- Foundational principles that promote both a thriving scientific enterprise and public trust in science:
- Emergency supplemental funding to allow the NIH to continue to make progress against COVID-19 and to resume pre-pandemic research; and
- Sustained, robust growth for the NIH's base budget across scientific disciplines and disease areas.

**Foundational Principles.** As we turn to a new year, we urge your Administration to keep these foundational principles in mind:

- To improve health for all, supporting medical research must be a top national priority.
  Beyond robust funding, this includes appointing distinguished scientists to key science advisory and science agency leadership positions as soon as possible, ensuring they have access to the President, as well as the trust of the scientific community.
- Public policies must be evidence-based and guided by sound and transparent scientific discoveries. By ensuring clear communication, we can increase public trust in science.
- Diversity, equity, and inclusion are essential to the advancement of the best science and to solving the myriad health and societal challenges we face today, including tackling the health disparities laid bare by the COVID-19 pandemic.
- Support for a strong research workforce pipeline is essential to ensure the U.S. is able to recruit and retain talented scientists into productive careers in medical research.
- Policies should facilitate a societal culture in which science can thrive and global, multisector collaboration is possible.

Emergency Supplemental Funding. As you know, the NIH plays an instrumental role in funding basic, translational, and clinical research in labs nationwide and facilitating the translation of this knowledge into applications for human health. For example, NIH-funded research has been critical to confronting the COVID-19 pandemic, among the most pressing public health crises of our time. Since the beginning of the pandemic, many NIH-funded researchers have focused on developing diagnostics, treatments, and vaccines for COVID-19. The incredible pace of scientific advancements over the past eleven months – from the rapid sequencing of the viral genome, to the development of new assays to test for infection, to preclinical and clinical testing of potential vaccine candidates and treatments – has been possible because of decades of NIH-funded basic research. As the world's largest funder of biomedical research, the NIH has invested billions of dollars in developing the technologies, collaborative research networks, and a workforce that enabled this accelerated pace of biomedical innovation in the face of the COVID-19 emergency. As the fight against COVID-19 continues apace, we urge continued supplemental investments in the NIH to sustain this work and to ensure that efforts to combat the pandemic do not displace other essential avenues of discovery.

Strong Commitment Across Disciplines and Disease Areas. Robust, sustained, and predictable funding growth for the NIH base budget is also essential to ensuring that the U.S. is able to meet the scientific challenges beyond the COVID-19 pandemic and that our nation's research institutions are able to rebuild in the face of devastating impacts to the biomedical research workforce. Continued investment in the broad array of biomedical research will be critical to furthering advances against the myriad diseases and conditions facing humankind, ranging from cancer to heart disease to stroke to diabetes to Alzheimer's disease. A robust investment in medical research as a part of support for the broader public health continuum is crucial to improving the health of all.

Historically, and especially over the last five years, Democrats and Republicans have joined forces to prioritize funding the NIH, helping the agency regain some of the ground that it lost after years of effectively flat budgets. This most welcome renewed investment in the NIH has accelerated discovery toward promising therapies and diagnostics, reenergized existing and aspiring scientists nationwide, restored hope for patients and their families, and facilitated critical basic and applied research aimed at ending the COVID-19 pandemic and other threats. Support for the NIH also yields important benefits for local economies. In fiscal year (FY) 2019, NIH-funded research supported more than 476,000 jobs across the U.S. and generated more than \$81 billion in new economic activity.

To further realize the potential of medical research, our nation must continue this forward momentum with sustained, robust budget growth. As you consider your administration's budget priorities for FY 2022 and beyond, the Ad Hoc Group recommends an ongoing commitment to meaningful growth above the cost of biomedical research inflation for the NIH. The stability associated with a budget trajectory that not only keeps pace with inflation but also allows investment in new research is essential to ensure we continue to push the boundaries of discovery toward meaningful outcomes for patients.

We are grateful for your outspoken support over many years for biomedical research and your leadership in making these funding and foundational commitments a reality. We offer the Ad Hoc Group and our community as a resource as you determine priorities and formulate budget requests as President. We look forward to working with you and your team toward our mutual goal of improved health.

Sincerely,

# 349 Signatories as of December 3, 2020
